

ABSTRACT OF THE DISCLOSURE

If only an operating button 14 is pushed, an electrically opening and closing mechanism 1 disengages a first clutch K1 while engaging a second clutch K2

5 to operate an electrically driving means 2 to automatically open or close a second member (e.g., a liquid crystal display panel) 4 which is rotatable with respect to a first member (e.g., a body having a plurality of keys) 3. If the operating button 14 is pushed, the

10 second member 4 automatically rotates to an optional angular position with respect to the first member 3, and if the operating button 14 is released (if the operating button 14 is returned to the original angular position by the spring force of a second spring 23),

15 the first clutch K1 is engaged at the optional angular position to hold the attitude of the second member 4.
